Chapter 1

Overview

1-1 Purpose.

The Georgia Army National Guard (GAARNG) Georgia Recovery Unit (GRU) successfully transitions medically disqualified Soldiers to either return to duty (RTD) if the Soldier becomes Medical Readiness Classification (MRC) 1 or 2, or to Veteran status through a comprehensive program of case management. If Soldiers reach their medical retention determination point (MRDP) by being able to continue military service, they will be referred to the Disability Evaluation System (DES) process or discharged accordingly. The GRU will successfully reduce the MRC 3 population of the state, therefore increasing the medical readiness of the GAARNG.

1-2 Applicability.

- a. GAARNG enlisted, warrant officers, and commissioned officers serving in a traditional drill (M-day) status.
- b. This guidance does not apply to T10 or T32 AGRs.
- c. Any Soldier who has a temporary profile (T3) over 270 days cumulative (Deployment Limitation Code 1, DL1).
- d. Any Soldier who is Dental Readiness Classification (DRC) 3 over 270 days cumulative (Deployment Limitation Code 2, DL 2).
- e. Any Soldier who meets the requirements for the MOS Administrative Retention Review (MAR2) program 90 days past due (Deployment Limitation Code 4, DL 4).

Chapter 2

Concept

- a. The GRU creates a company level unit for the state to cross-level Soldiers available for deployment into positions encumbered by long-term medically non-available personnel. The GRU provides the GAARNG leadership an opportunity to increase medical readiness by placing Soldiers into medical programs with the goal of returning to duty (RTD) or discharge.
- b. Soldiers with a medical condition that warrants separation from the military are candidates for transfer into the GRU on a voluntary basis; or can be command directed based on home of record (HOR). Units along with the Medical Actions Branch (MAB) will identify Soldiers who meet the applicability criteria for entry into the GRU and coordinate attachment while remaining assigned to their organic units in their primary PARA/LIN. Soldiers will clear their units to include any administrative or supply requirements before attachment to the GRU. Any Soldier requesting a Line of Duty (LOD) must have the LOD already initiated by their unit and at State Admin level for informal and Investigation level for Formal LODs.
- c. Soldiers accepted will attend Inactive Duty Training (IDT) and complete Annual Training (AT) with the GRU at Clay National Guard Center (CNGC) located in Buildings 399 and 408 during designated drill dates until released from the GRU or discharged.
- d. Soldiers who are referred and successfully enter the DES process for a Medical Evaluation Board (MEB) or Non-Duty Related Physical Evaluation Board (NDR-PEB) will continue to drill with GRU until adjudication for final discharge or retirement processing out of the military.
- e. Soldiers who return to MRC/DRC 1 or 2 status will be released from the GRU back to their assigned units and will have seven days from release from the GRU to report to their organic unit.
- f. Soldiers who fail to comply or are deemed non-compliant while attached to the GRU will be discharged based upon the qualifying years of service on their Retirement Points Accounting Management (RPAM) statement.
- g. Quarterly, Medical Actions Branch (MAB), and the Major Subordinate Commands (MSC) will identify Soldiers for acceptance into the GRU.

Chapter 3

Process Steps

- a. Unit commanders may direct Soldiers who meet the entry criteria to participate with the GRU. For Soldiers who live outside of commuting distance to the GRU, these Soldiers must volunteer for this program.
- b. GRU leadership will identify potential candidates who meet the entry criteria to begin drilling with the unit at the beginning of each quarter via the G3 Fragmentation Order (FRAGORD) submission process. Soldiers must have greater than 12 months remaining on their enlistment contract to enter the GRU.
- c. MSCs will have 30 days from FRAGORD publication to submit completed entry packets. The checklist will be completed prior to acceptance into the GRU. Packets not completed within the 30 days will not be accepted for entry.
- d. Once attached, Soldiers will report for drill at the GRU located at Buildings 399 and 408 on CNGC in Marietta, GA and will complete all IDT and AT with GRU until adjudication.
- e. Upon reporting to the GRU, all Soldiers will receive initial counseling on DA Form 4856 Counseling Form. During their in-processing, Soldiers will also complete a medical review of their MRC/DRC 3 condition by a military medical provider or designee to determine the requirements for successful completion of the GRU process.
- f. GRU staff will provide command and control (C2), case management, and packet development to assist Soldiers assigned. During each drill, Soldiers will meet with assigned GRU staff for assistance and guidance with completing medical program checklists or gathering required medical documentation.
- g. GRU case managers will assist each Soldier in collecting required medical documentation, completing checklists for packet development, and submitting packets to the appropriate MAB program manager for processing.
- h. Soldiers will receive an updated DA Form 4856 Counseling Form during each IDT period to review progress and determine requirements to continue through the process. Soldiers will be subject to GCMJ authority under GRU and must remain compliant to stay in the program or face discharge, adverse administrative action, or the GCMJ process. Soldiers who accrue 2 unexcused absences for IDT periods may be released back to their organic units.
- i. Soldiers may utilize statutory AT status to facilitate appointments with their civilian Primary Care Providers (PCP) to seek care and obtain updated medical documentation required for checklist completion. Utilization of AT orders must be related to the duty limiting or disqualifying.
- j. Upon packet completion for medical programs, packets will be submitted to MAB program managers for review and action. MAB program managers will follow their SOPs to facilitate submission of packets through the proper channels.
- k. Once packets are submitted, Soldiers will continue to drill with the GRU until RTD, acceptance into a medical program, successful entrance into the DES process, or discharge utilizing the Medical Retention Determination Point (MRDP) process. Soldiers who are RTD will be released from the GRU back to their parent units within seven days of adjudication.
- l. GRU staff will coordinate with Soldier's organic unit to submit all required medical documents and packet requirements to the G-1 for discharge or retirement processing to include separation awards.
